

1R

OneRaise

# The world's first borderless trust protocol

Crowdfunding where money moves on proof — not promises.

Stablecoins

African payment rails

AI-native fintech

Agentic payments

## THE PROBLEM

# Half the world is **locked out** of global crowdfunding.

### The access gap

- GoFundMe, Kickstarter, Stripe — block most of Africa, LatAm, South Asia, Middle East
- Creators with real causes can't even open an account

### The trust gap

- Funds that do get through move on slow, costly rails
- Weeks of delay, lost to fees and FX
- Donors can't verify their money achieved anything

Billions in goodwill capital never reaches the people who need it — or arrives with no proof it worked.

WHY NOW

# The rails finally exist.

**\$160B+**

Stablecoin supply now settling real payments globally

**<\$0.01**

Solana transaction cost — micro-donations finally viable

**Africa**

Fastest-growing stablecoin adoption region; mobile-money native

- Tether and stablecoin issuers expanding aggressively into African corridors
- Local rails (Busha, Raenest, Paystack) now bridge crypto ↔ local currency instantly
- Africans are adopting stablecoins faster than anywhere on earth — to escape inflation and broken cross-border banking. The demand is already here; the trust layer isn't.

## THE SOLUTION

# Money held in escrow. Released only on **verified milestones**.

- Contributions held in **stablecoin escrow on Solana** — settles in seconds, near-zero cost, no FX loss
- Funds release to creators **only as predefined milestones are verified** — the "Protect" protocol
- Connects **African rails** (Busha, Raenest, Paystack) to global liquidity — anyone, anywhere can fund anyone, anywhere
- On-chain **proof of impact** for every release; Cloak adds donor privacy with an auditable compliance trail

We don't just move money. **We move trust.**

## PRODUCT

# Live, mainnet-ready, demoable today.

78

Countries supported at launch

40+

Currencies with local payout

0%

Platform fee on first campaign

USDC

Milestone escrow live in code  
(→ USDT next)

- Built on Next.js 16 + Solana + Cloak privacy SDK
- AI-assisted campaign creation (titles, goals, descriptions)
- Real-time backer + impact analytics dashboard

# Remove the chain and the product breaks.

## What only crypto enables

- **Permissionless access** — no bank account, no platform gatekeeping
- **Trustless escrow** — funds locked by code, not a company holding your money
- **Verifiable proof** — every disbursement on-chain, publicly auditable

## Why Solana specifically

- Sub-cent fees make small cross-border donations viable
- Seconds to settle — creators get funds fast
- Mature stablecoin + USDC liquidity

## TRACTION

# Shipped product, pre-launch.

### MVP

Full end-to-end product  
deployed & demoable

Mainnet-ready

### Q3

First real campaigns  
launching

2026

### 78

Countries reachable day one

### Live

Escrow + Cloak privacy + AI  
tools working

Architecture and core flows are built and working today. Current dashboard figures are sandbox test data — first real campaigns launch this quarter.

ROADMAP · NEXT 12 MONTHS

# From shipped MVP to scaled protocol.

MO 1–3

## Mainnet launch

First 50 creators across Kenya, Nigeria, Ghana. Integrate Tether (USDT/USDe) as primary settlement.

MO 4–6

## Rails + trust

Deepen Busha / Raenest / Paystack payouts. Milestone verification + verified-badge. \$100K+ processed.

MO 7–9

## Agentic disbursement

AI-agent milestone verification + automated escrow release. Begin pre-seed (SAFE) on real traction.

MO 10–12

## Scale beyond Africa

Expand to LatAm, South & SE Asia, Middle East. 500+ creators, 10+ markets. Open campaign API.

## TEAM

# Builders who ship.

## Greaze Mike

Founder — product, full-stack & GTM. Built and shipped OneRaise end-to-end, solo.

# 1

Solo founder — entire product live without outside capital

Capital-efficient execution; hiring first engineers post-raise

**[CONFIRM / personalize:]** I'm building OneRaise because I've watched creators and causes across Africa get shut out of the platforms the rest of the world takes for granted — and watched the money that does get through vanish into fees with no proof it ever helped. I'm building the trust layer I wish existed.

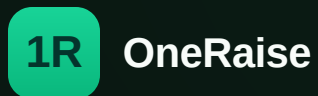

## THE ASK

# What we want from Vibe Haus.

- Hands-on GTM + fundraising guidance from Hashed Emergent & Tether
- Integrate **Tether infrastructure** as our settlement layer during the residency
- Ship **agentic disbursement** + run first live campaigns → Demo Day deliverable
- Investor relationships to turn a working MVP into a fundable, scaled protocol

Raising next: **pre-seed SAFE**, post-launch

Use: **scale African rails + agentic payments**

# One Goal. One Platform. OneRaise.

Move trust, not just money — to every market the world locked out.
